Agile Professional Services

Delivering holistic Agile solutions through certified industry expert resources

Agile Transformation at Speed of Change

Understanding the value case to adopt Agile methodology can be overwhelming in today's dynamic and complex IT environments. Using our holistic approach, your organization can deploy Agile solutions at a greater speed by implementing rapid requirements development methodology, release schedules, formulating MVPs and leveraging techniques like Scrum, Lean, Kanban, or XP, all executed and managed by industry expert resources.

Our experience provides us a robust knowledge base to help you with Agile strategy, integration into a target operation model and adaptation to the scale and cultural impacts of an Agile business.

Higher Success Ratio
Success rate in Agile projects is higher than the industry average

80%

Reduce Cost
Agile implementations that reduce cost by

20%

Continuous Integration
Practices of daily builds and tests reduce cycle time by

>40%

Increase Team Productivity
Active partnership with key stakeholders, information transparency and role mobility delivers clear visibility of the overall project timeline

Accelerate Product Delivery
Through use of in-house product accelerators, if and when required

Adaptable to Changing Priorities
Adjust model and scale to an organization's changing priorities to ensure the result accomplishes the overall goal

Global Presence
On-shore and off-shore resources help to lower cost, improve face time, increase productivity and add value

Portfolio and Expertise

- **SMEs** – World-class pool of certified leaders and resources with 15+ years of experience
- **Domain** – Successful implementations of Agile methodologies including Scrum, Kanban, Lean, or XP using a variety of models
- **Industry** – Expertise in the Life Sciences, Pharma, Financial, Insurance, PBM and Retail domains with experience leading small/medium to large complex project portfolios
- **Regulatory** – In-depth understanding of the regulatory rules and government guidelines which ensure projects adhere to any regulatory reporting or constraints
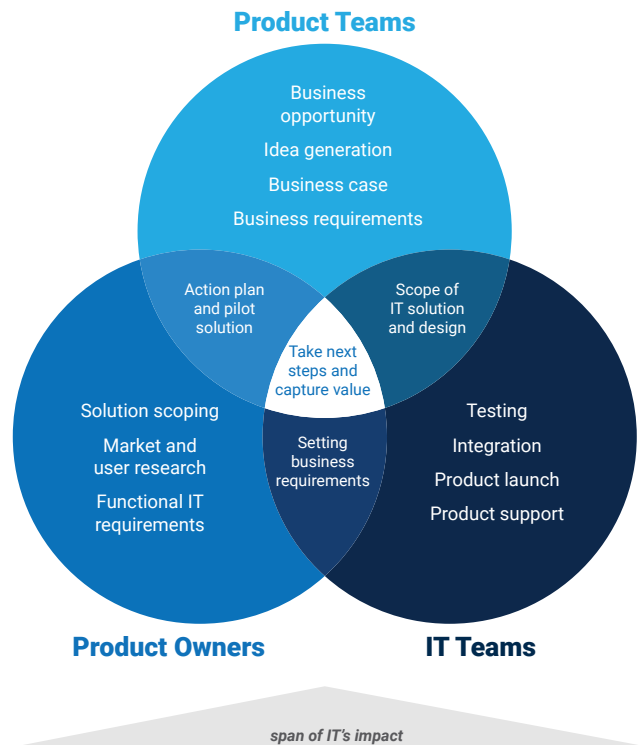

Customer-Focused Approach

- **Quality and ROI focused** – Improve quality and reduce time to market and costs for clients by integrating and collaborating with different teams to create a focused synergy
- **Flexible approach** – Continuous interactions with the client/business during the SDLC to enforce controls and ensure flexibility to adapt, transform, and deliver based on customer needs and priorities
- **Collaborative squad model** – Agile methodology allows teams to collaborate and transition from IT execution-only into a partnership model between teams to deliver the full impact of the solution

Value

- Reduce TCO and increase ROI through the integration of cloud computing, DevOps, and Agile
- Increase productivity through Stakeholder collaboration, team synergy, and predictable delivery
- Ensure business and IT strategic alignment through a transparent delivery model that focuses on high-quality development and testing
